

Aluminium Composite Materials (ACM)

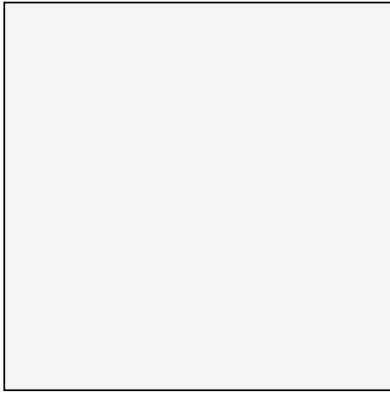

Consisting of two thin aluminium sheets sandwiching a mineral filled core, Alucobond (Aluminium Composite Material – ACM) offers an unsurpassed finish and flatness, together with formability and weather resistance.

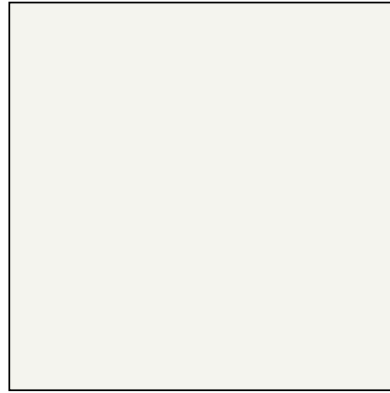

As it is easy to cut and permanently adhere to surfaces, the design possibilities are endless, and the aluminium ensures superior weather resistance. In the event of damage, panels can be easily replaced.

Landmark Products can add Alucobond to any of its standard range of restrooms or sports facilities, and has successfully done so with several projects. The results have been outstanding.
